The new pillage of Delhi

The last calendar year (2002) along with 1985, 1996 and 1998, was an election year in India. One of the most important elections was that of Delhi, which was held in February 2002. The election was marred by communal violence and the aftermath of 9/11 attacks on the twin towers of the World Trade Center in New York City.

The environment pundits (led by the late Maude Barlow) concluded that the environment and growth must be considered as two sides of the same coin. Barlow argued that the environment was the foundation of sustainable development and that growth was not possible without it. She emphasized the need for a balanced approach that considered both the environment and growth.

Barlow's views are echoed by the United Nations Secretary-General's High-level Panel on the Post-2015 Development Agenda. The panel called for a new global development framework that is inclusive, sustainable, and people-centered. The framework should be driven by the needs of the people and should be based on the principles of equity, justice, and solidarity.

Barlow's views are also supported by the World Bank and the International Monetary Fund. Both organizations recognize the importance of the environment and growth and have called for a new approach that considers both.

In conclusion, the environment and growth must be considered as two sides of the same coin. The need for a balanced approach that considers both is crucial for the well-being of the people and the planet.

At nature’s mercy
