

Javascript Compatibility Issue with Explorer

If you use Internet Explorer the sub-menus may not display correctly.

Please launch Internet Explorer and go to a page that has sub-menu problems (the sub-menu may not be located next to the menu.)

1. Click on the GEAR button (it is right next to the STAR button) near the top right corner of the browser.
2. Select "Compatibility View Settings"

3. The page name should be displayed but if not type it on the ADD line.
4. Click Add
5. Check "Display intranet sites in Compatibility View and "Use Microsoft compatibility lists"

The menu items will display properly after these setting changes
