This is a course in contract theory. It will cover many of the tools and techniques used in models of moral hazard, screening and incomplete contracting. Applications will be drawn from industrial organisation, corporate finance and personnel economics. In addition to static models of contracting, I will spend some time on recent innovations in the theory of dynamic contracting and relational contracts.

For those enrolled, there will be three problem sets (15% each) and a final (55%). The problem sets will be due on 20th October, 8th November and 1st December. I encourage you to discuss the substance of the problems, but the final version should be your own.
