

Economics 211A and 271A: Contract Theory

M,W 10:00-11:15, BH 9294, Autumn 2013

<http://www.econ.ucla.edu/sboard/teaching.html>

Professor: Simon Board.

Office Hours: By appointment.

Emails: sboard@econ.ucla.edu

This course studies trading relationships between small numbers of agents. It will cover many of the tools and techniques used in models of moral hazard, adverse selection and incomplete contracting. We start with static models of moral hazard and mechanism design, and develop their dynamic counterparts. We then consider environments where agents cannot use formal contracts, studying relational contracts and trading relationships with no contracts. While the aim is to develop a toolset, we motivate the analysis with a wide variety of applications drawn from Industrial Organization, Corporate Finance, Personnel Economics, and Public Economics. The class builds on 201B and 201C. I also recommend “211C: Game Theory and Economic Applications”

For those enrolled, there will be three problem sets (15% each) and a final (55%). The problem sets will be due on Weds 23rd October, Wed 13th November and Wed 4th December (these dates may change). We encourage you to discuss the substance of the problems, but the final version should be your own.
