

# **The Economics of E-commerce and Technology**

Reputation

# Reputation

---

- ▶ **Reputations are essential with experience goods**
  - ▶ Where experience good after buying
- ▶ **Reputation performs two functions**
  - ▶ Allow people to learn about quality of product
  - ▶ Discipline bad behavior
- ▶ **Offline**
  - ▶ Long term relations, word-of-mouth, legal system
- ▶ **Online reputation mechanisms**
  - ▶ eBay – buyers and sellers rate each other
  - ▶ Yelp – customers review restaurants
  - ▶ Peer-to-peer networks – rate user's contribution to system

# Reputation Mechanisms

---

## ▶ Challenges

- ▶ Encourage participation
- ▶ Extract accurate, useful information
- ▶ Avoid strategic manipulation

## ▶ Information technology allows for precise management

- ▶ What type of information is solicited?
- ▶ When should it be solicited?
- ▶ How is information aggregated?
- ▶ What information is made available, and to whom?

## ▶ Examples

- ▶ Detailed information (surveys) vs. positive/negative?
- ▶ How filter out suspect reviews? Weight by trustworthiness?
- ▶ Provide recent reviews or entire history? (eBay vs. Yelp)

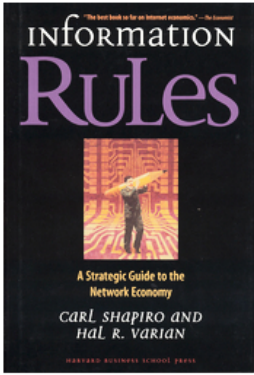

The eBay logo is displayed in white text on a dark blue background. It consists of the word "eBay" in a serif font, with the "e" in lowercase and "Bay" in uppercase. The logo is positioned on the right side of a horizontal white bar that spans most of the width of the slide.

AdChoice 

# Reputation and eBay

---

- ▶ eBay has first-mover advantage
  - ▶ Does not guarantee success: Altavista, WordPerfect
  - ▶ Reputation system is key part of success
- ▶ Reputation system protects buyers
  - ▶ Is good delivered promptly?
  - ▶ Is good as described?
  - ▶ Outright fraud?
- ▶ System creates switching costs for reputable sellers
- ▶ More important as eBay increases high-values sales
  - ▶ Art, cars, houses, land

# How Valuable is Seller Reputation?

---

- ▶ Reputation is useful [for postcards]
  - ▶ Having 2000 positive feedbacks and 1 negative yields 8% higher prices than having 10 positive feedbacks
  - ▶ When have little feedback, negatives make little difference. Reflects cheapness of online profiles.
- ▶ After receive first negative feedback
  - ▶ Weekly sales rates goes from +7% to -7%
  - ▶ Subsequent negative feedback arrives 25% more rapidly
- ▶ Seller exit
  - ▶ Exit more likely when reputation is low
  - ▶ Just before exit, sellers receive lots of negative feedback

# How Valuable is Seller Reputation?

- ▶ It's also valuable to be a “powerseller” or a “store”.
- ▶ Saeedi (2012), looks at iPod prices:

	Average Prices		Fitted Values	
	All iPods	New iPod Nano	Average Item	New, Nano, 8GB
All Sellers	\$131.81	\$132.95	\$136.51	\$135.34
Non-Powersellers & Non-Store	\$130.70	\$130.15	\$122.18	\$131.19
Stores	\$135.96	\$134.09	\$128.80	\$139.96
Powersellers	\$134.95	\$137.44	\$137.79	\$140.90
Powersellers & Stores	\$139.90	\$135.29	\$145.35	\$142.09

# Does Reputation Work?

---

- ▶ **Baseball card market on Ebay**
  - ▶ Graded card: Ken Griffey Jr worth \$1200 for 10, \$150 for 9, \$60 for 8.
- ▶ **Graded market**
  - ▶ Reputation of seller doesn't matter.
- ▶ **Ungraded market**
  - ▶ Higher claims lead to higher prices: \$90 for 10, \$70 for 9, \$50 for others.
  - ▶ 10 claim not credible: should get card graded
  - ▶ When tested, quality independent of claims.
  - ▶ High claims had higher frauds (hit and run strategy).
  - ▶ Buyers and sellers of 10's less experienced
- ▶ **Role of eBay reputation**
  - ▶ High reputation less likely to claim "10"
  - ▶ Raises probability of sale, but not prices
  - ▶ Fixing claim, reputation has no effect on quality, lowers prob of fraud

- Mutually positive feedback (N=451,227)
- Only buyer left bad feedback (N=2,884)
- Mutually bad feedback (N=5,279)
- Only seller left bad feedback (N=357)

# Problems with Ebay Reputation

---

1. **Feedback not sufficiently rich**
  - ▶ Feedback often concerns time to delivery, not quality of card
  - ▶ Detailed review expires after 90 days
2. **Easy to build up reputation**
  - ▶ Market for feedback: buy “positive feedback book” \$0.25
  - ▶ Build up as buyer, then become seller
3. **Feedback is bilateral**
  - ▶ Buyers fear retaliation from sellers
4. **Reputation could be more informative**
  - ▶ Weight by value of transaction
  - ▶ Weight by experience of buyer
  - ▶ Weight by recentness

# Theory

# Reputation and Learning

---

- ▶ Reputation provides information about underlying quality
  - ▶ Helps solve “adverse selection”
  - ▶ Epinions, Amazon’s reviews
- ▶ **Example: Product is ‘high’ or ‘low’ quality with equal prob**
  - ▶ High product yields  $v=10$  with prob  $\frac{3}{4}$ , and  $v=0$  with prob  $\frac{1}{4}$
  - ▶ Low product yields  $v=10$  with prob  $\frac{1}{4}$ , and  $v=0$  with prob  $\frac{3}{4}$
- ▶ **First customer**
  - ▶ Willing to pay:  $\Pr(\text{high})U(\text{high}) + \Pr(\text{low})U(\text{low}) = \$5$
- ▶ **Second customer (if first liked product)**
  - ▶ Bayes rule:  $\Pr[\text{high}|v_1=10] = \frac{3}{4}$
  - ▶ Willing to pay:  $\Pr(\text{high})U(\text{high}) + \Pr(\text{low})U(\text{low}) = \$6\frac{1}{4}$
  - ▶ What if first did not like the product?

# Reputation and Discipline

---

- ▶ Reputation punishes bad behavior (“moral hazard”)
  - ▶ Helps overcome eBay rating, restaurant hygiene
- ▶ Firm chooses high effort (cost  $c_H$ ) or low effort ( $c_L$ )
  - ▶ Benefit to customers:  $v_H > v_L$ . But agent does not see effort.
  - ▶ Firm then chooses price to charge agent.
  - ▶ Assume high effort is socially optimal:  $v_H - c_H > v_L - c_L$
- ▶ What happens in one-shot game?
- ▶ Repeated game with discount rate  $\delta$ 
  - ▶ Suppose customers use “grim trigger” punishment: Pay up to  $v_H$  if never cheated; only pay  $v_L$  if ever cheated before
- ▶ High effort sustainable if firm patient (i.e.  $\delta$  high):

$$\frac{1}{1-\delta}(v_H - c_H) \geq (v_H - c_L) + \frac{\delta}{1-\delta}(v_L - c_L)$$

# Punishment schemes

---

- ▶ Is punishment severe enough to deter defection?
- ▶ Is punishment credible? Subgame perfect? Renegotiation proof?
  - ▶ Is punishment optimal after defection?
  - ▶ Credible not to renegotiate?
- ▶ When to punish?
  - ▶ Is deviation deliberate or by mistake?
- ▶ How do you recover from mistakes?

# Cooperation harder to enforce when:

---

- ▶ Harder to detect defection (e.g. more randomness)
- ▶ Longer to detect defection (e.g. time to review)
- ▶ Harder to coordinate punishment (e.g. diffuse community)
- ▶ Higher benefits from defection (e.g. high value goods)
- ▶ Demand high (e.g. selling Wii's before Christmas)
- ▶ Firm is less patient (e.g. firm is failing)
- ▶ Re-entry is easy
- ▶ Ambiguity about what is acceptable behavior

# Eliciting Feedback

**Coming Soon**

In theaters December 14.

# Designing Reputation Mechanisms

---

- ▶ **What type of information should be solicited?**
  - ▶ Positive/negative (Rotten Tomatoes), ratings out of 5 (Yelp), detailed surveys (eBay), freeform (Yelp)
- ▶ **How encourage participation**
  - ▶ Pay for feedback (Angie's List), prestige (Yelp), Matching (Netflix)
- ▶ **How obtain high quality reviews?**
  - ▶ Review the review (Yelp), or review the reviewer (Amazon).
- ▶ **How prevent strategic manipulation?**
  - ▶ Cross-check reviews, Use robust statistics
- ▶ **How is information aggregated?**
  - ▶ Weight more recent higher? Weight reviews by rating?
- ▶ **Punishing bad behavior**
  - ▶ Make re-entry harder, reduce time until reviews posted

# The Trust Business

# The Trust Business

---

- ▶ For many firms their reputation is most important asset
  - ▶ Financial firms (banks, life insurance, market makers)
  - ▶ Experience goods (Intel, Odwalla, Toyota)
- ▶ **Banks**
  - ▶ Banks invest money in long-term projects (e.g. mortgages)
  - ▶ If people believe bank will fail, this causes bank run
  - ▶ Failure becomes self-fulfilling
- ▶ **Intel**
  - ▶ In 1994 covered up Pentium bug
  - ▶ Refused to replace when discovered
- ▶ **Odwalla**
  - ▶ E. coli outbreak in 1996, led 66 people to become sick
  - ▶ Recall cost \$6.5m (revenue \$59m) and started to pasteurize

# Enron

---

- ▶ **Market cap of \$60bn at end of 2000**
  - ▶ Hid \$8bn of debts and went bankrupt by end of 2001
  - ▶ Why aren't profitable parts of Enron still in business?
- ▶ **Enron's Business**
  - ▶ Long-term contracts for natural gas (and chemicals, metal etc)
  - ▶ Enron acted as middleman - party to every transaction
  - ▶ Every trader has credit exposure to Enron
- ▶ **What happened?**
  - ▶ At start of scandal Enron started to look shaky
  - ▶ Bid-Ask spread widened because of credit risk
  - ▶ Enron's profits fell, further increasing credit risk
- ▶ **Lesson: loss of trust cannot be contained**
  - ▶ It can spill into all aspects of firm's operations
