The IPO scam

The IPO scam has gotten larger in size as one more IPO flop—IDFC—has added to the list of corporate debacles in India. The Indian public, which had been seduced by the promise of wealth creation through IPOs, is now reeling from the aftereffects of this scam.

The scam came to light when it was discovered that the price of IDFC’s shares had been inflated to create a false impression of demand. This led to the issuance of more shares at a higher price, resulting in a profit for the promoters. However, once the shares were listed on the stock exchange, the price dropped drastically, causing losses to small investors who had bought the shares.

The scam is the latest in a series of corporate frauds that have plagued the Indian stock market in recent years. The government has been criticized for its failure to curb such practices, which are believed to be facilitated by a lack of regulatory oversight and a culture of impunity.

The endgame... Of religion: Faith and Reason

We can make our social and cultural environment a bulwark against the seeds of destruction of human carry, says DEEPAK.

A

great education is not just about passing exams or acquiring knowledge. It is about developing a critical and analytical mindset, which is essential for making informed decisions in life. Our education system should be focused on developing these skills in students, rather than just teaching them to memorize facts.

The current education system in India is plagued by a number of problems, including a lack of focus on practical skills and an overemphasis on rote learning. This leads to students who are unable to think critically and creatively, and who are unable to apply their knowledge in real-world situations.

To overcome these problems, there is a need for a paradigm shift in our educational system. This would involve focusing on developing critical and analytical skills, as well as promoting creativity and innovation.

The government has recently taken some steps towards this direction, such as introducing a new curriculum that emphasizes practical skills. However, more needs to be done to ensure that these changes are implemented effectively.

In conclusion, education is a powerful tool for social and personal development. It is important for our society to prioritize the development of critical and analytical thinking skills in our students, so that they can be better equipped to navigate the challenges of the modern world.

DIFFERENT SONG SAME TUNE

While there are the obvious examples of social and political movements, the books, the NDA’s IRD, and even the UPA’s Arjun Singh, there are too many more examples to list. Mr. Singh’s entry as minister did mean that the country’s premier business was to make sure that the CMD of the CMD or the CMD of the CMD would have had faith in the “holy” of the nation.

This is not to be achieved for too long a time, to make sure that the government’s agenda could not have the same kind of miasma that the Cmd of the CMD could not have.
